

Thermoplastic Granular Filter

Economical low maintenance filtration

Thermoplastic granular filters operate on the basis of “depth filtration”; dirt is driven through the filter bed and trapped in minute spaces between the particles of filter media.

Cleansing the filter simply requires turning the filter’s multiport lever from the “filter” position to the “backwash” position, which reverses the flow of water in the filter, flushing the filter bed.

Thermoplastic Construction

Manufactured from the highest grade of non corrosive materials and applying precision plastic injection moulding techniques, Thermoplastic filters are built for long lasting performance.

Easy Maintenance

Cleansing the filter simply requires turning the Multiport lever from the 'filter' position to the 'backwash' position.
